EDUCATION

National University of Computer and Emerging Sciences (FAST) Aug 2020 – Dec 2024
Bachelor of Science in Cybersecurity · Karachi, Pakistan

TECHNICAL SKILLS

Languages: Python, C/C++, JavaScript, C#, Rust, Shell, HTML, CSS, SQL
Frameworks & Libraries: FastAPI, Django, Flask, React, Next.js, Node.js, TensorFlow, Keras, PyTorch, Scikit-learn, Pandas, NumPy, Matplotlib
Tools & Platforms: Git, Docker, PostgreSQL, BigQuery, AWS, Azure, Google Cloud, LoRA, Windows, Ubuntu, Kali Linux

EXPERIENCE

Hyve Labs — AI Engineer Feb 2026 – Jul 2026

Full-Stack Dashboard Modernisation *(Next.js · FastAPI · BigQuery · GCP · AWS · Python)*

- Replaced a Power BI reporting suite with a custom Next.js and FastAPI application, delivering faster load times and a more intuitive user interface
- Built Python ETL pipelines to extract data from Business Central APIs, serialize payloads, and load into BigQuery on GCP, centralising previously scattered data and improving query consistency
- Re-implemented Power BI DAX calculation logic in the FastAPI backend, fully decoupling reporting from the BI platform and reducing estimated BI licensing costs by 40–60%
- Embedded a user feedback loop into the product to support continuous improvement post-launch

Data Engineering *(Python · MoEngage · Databricks · Azure)*

- Reworked choked MoEngage data pipelines on Azure Databricks, resolving data inaccuracies and restoring reliable downstream reporting and segmentation workflows
- Scheduled pipelines for daily automated execution, ensuring consistent and up-to-date data availability

AI Pipelining *(Python · Next.js · LoRA · ChatGPT · Gemini)*

- Developed an AI video generation pipeline for Sobha Video Ads, enabling automated video combination, narration, and end-to-end ad creation, significantly reducing manual effort in video production
- Built SEO metadata generation tools for DP World and Gallop AI, improving the SEO friendliness of existing and future articles creation through automated enrichment and workflow automation

InApp Solutions — Junior Software Engineer Oct 2025 – Feb 2026

- Maintained continuous availability of MedfloAI by managing ongoing system upkeep, monitoring, and issue resolution across the full stack (React, FastAPI, Python, SQL)
- Migrated MedfloAI's legacy Django-based scraper to a dedicated FastAPI microservice, reducing main server load and improving scraping speed through isolated deployment on a separate server (React, FastAPI, Python, SQL)
- Developed MedfloAI's Patient Analytics microservice using React for the UI and FastAPI for backend services, ensuring availability of insights from patients' data (React, Python, FastAPI, SQL)

Devoski Systems — Python Developer (Contract) Jul 2025 – Sep 2025

- Built a multi-tenant system with role-based access control using React, Django REST Framework, Pandas, and MySQL
- Developed a QR code generator web application with employee authentication and database integration on Django ORM

PROJECTS

Global Leads — Lead Intelligence Platform *(Python · DjangoREST · React · MySQL · LangChain · Pandas · Ollama)*

- Built a multi-source lead ingestion system integrating Yelp Fusion and Google Business Profile APIs, normalising output into structured datasets with Pandas
- Developed a Django REST Framework backend with JWT authentication, granular role-based access control, user and role management, and password reset via expiring JWT tokens
- Built a React/Vite admin portal with protected routing, role-driven navigation, and a leads dashboard exposing enriched contact data to internal operations teams

AI Sales Co-Pilot *(Python · Ollama · FastAPI · Electron · RAG · Qwen · React · Qdrant)*

- Fetched transcription from zoom API but the latency was still too high of about 3.2 seconds.
- Built a RAG Pipeline to create a new collection in Qdrant and added document to the collection for company information.
- Generated real-time suggestion using Qwen-7B-Chat with accurate company specific information.

Smart Traffic/Vehicle Monitoring System — Real-Time Vehicle Detection Analytics Platform *(Python · YOLOv8 · ByteTrack · OpenCV · FastAPI)*

- Built a real-time pipeline using YOLOv8 and ByteTrack to detect and track vehicles/pedestrians, with line-crossing counting, directional analytics, and FPS monitoring

CERTIFICATIONS

AWS – Fundamentals of Machine Learning and Artificial Intelligence

- Covered core ML concepts including supervised and unsupervised learning, model evaluation, and neural network fundamentals; deep learning architectures; generative AI foundations including large language models and diffusion models; and AWS-specific AI/ML services such as SageMaker, Bedrock, and Rekognition.
