SUMMARY

Cybersecurity graduate (BSc, FAST-NUCES) based in Karachi, Pakistan, and software engineer with hands-on experience building secure applications, identity systems, and security tooling. I write code (Python, FastAPI, Django) and I know how to break it (Wireshark, Burp Suite, Kali). Seeking a Junior Security Engineer, AppSec, or DevSecOps role where my development background strengthens security outcomes.

EDUCATION

BSc Cybersecurity Aug 2020 – Dec 2024
FAST-NUCES, Karachi
Coursework: Network Security, Ethical Hacking, Cryptography, Secure Software Design, Cloud Computing, Blockchain

TECHNICAL SKILLS

- **Security & Networking:** Kali Linux, Wireshark, Burp Suite, Nmap, Cryptography (AES, SHA-256), IAM / RBAC, TCP/IP, Subnetting, Packet Tracer, Secure File Transfer
- **Scripting & Automation:** Python, Bash/Shell (log parsing, directory scanning, automation)
- **Languages:** Python, C/C++, JavaScript, C#, Rust, SQL
- **Cloud & Infrastructure:** AWS (IAM, Security Groups, Logging), Azure, GCP, Docker, Git
- **Frameworks:** FastAPI, Django, Flask, React, PostgreSQL, BigQuery

SOFTWARE ENGINEERING EXPERIENCE

Hyve Labs — *AI Engineer* Feb 2026 – Jul 2026

- Engineered Python ETL pipelines extracting Business Central API data into GCP BigQuery, ensuring data consistency and integrity.
- Re-implemented reporting logic in FastAPI, cutting BI licensing costs by 40–60%.
- Reworked Azure Databricks pipelines, troubleshooting and resolving data inaccuracies.

InApp Solutions — *Junior Software Engineer* Oct 2025 – Feb 2026

- Maintained full-stack availability of MedfloAI (React, FastAPI, Python, SQL), handling monitoring and incident resolution.
- Migrated a legacy Django scraper to a FastAPI microservice, improving performance and reducing server load.

Devoski Systems — *Python Developer (Contract)* Jul 2025 – Sep 2025

- Built a multi-tenant system with role-based access control (RBAC) using React, Django REST Framework, and MySQL.
- Developed a secure QR code generator with employee authentication and database integration.

SECURITY PROJECTS

Secure File Transfer System — *Python, Cryptography*

- Built a peer-to-peer file transfer app enabling direct, encrypted exchange between peers without a central server.
- Implemented AES encryption for data and key exchange, plus SHA-256 integrity verification to detect tampering.

Decentralized Identity Management System — *Python, MultiChain*

- Built a blockchain-based identity system to securely store and retrieve personal records.
- Secured on-chain data using cryptographic hashing, multi-signature authorization, and image-matching verification.

Malware Signature Scanner — *Python, YARA*

- Developed a command-line Python tool that scans files against custom YARA rules to detect and flag known malicious signatures and patterns.

Command-Line Chat Room — *Python, TCP Sockets*

- Built a multi-client chat application using Python TCP sockets, handling real-time message broadcasting and connection management.
